

# Vertebral Subluxation

The art rendering below shows a segment of a spinal column with a vertebral subluxation — a spinal vertebra out of place and a pinched nerve and a degenerated disc.

A subluxation resulting in a pinched nerve, such as shown above, has been proven to interfere with nerve transmission to various organs and tissues of the body, and may be the cause of many health problems. Your pain or health problem may be caused by a nerve blockage by a vertebral subluxation. Make sure your nerve channels are clear by having a Doctor of Chiropractic check you.
